November 2023

Qualifier One Highlights ♥

Qualifier One Recap

We started our season with a bang at **Qualifier One**! On **November 18**, we rode to the High School of Construction Technology Engineering and Architecture with a lot of coffee, less than five hours of sleep, and a mission. The day started off strong with driving practice and our presentation. We then competed in many matches and were grateful to be selected by **Team 13368 - the Mechatronics** for the ranked rounds. Sadly, we lost in the finals but had great matches throughout the day. We are proud to also have won numerous awards including **third place Think Award and Control Award**. Our highlight of the day (besides spending time with all of the other teams) was winning the **first place Inspire Award**! We are so grateful for this opportunity and can't wait to continue improving and growing as a team. Our next competition is at the end of January, so until now we will be updating our robot and making sure that all parts of our team continue to improve. Overall, November has been a successful month for us, and we're looking forward to future developments on our team!

Monthly Spotlight - Daniel

The monthly spotlight of this month is Daniel, one of our heads of mechanics and the driver of our robot. Daniel has been on the team for five years now, joining AIM during our First Lego League years. This month, he has been extremely helpful in our robot's construction progress. Additionally, Daniel's diligence has made sure that the team stays on track. Even with his recent shoulder surgery, Daniel has used his Fortnite practice to drive our robot to success during competition. We are so grateful for all of his work.
